

Fork Positioner for Forklift

Forklift Fork Positioners - The fork positioner is actually a hydraulic apparatus which allows the the one driving to be able to operate the forklift without leaving the seat. They are constructed out of high quality materials and are designed to be able to endure the most challenging procedures and work environments. Side shifting units have the extra ability to laterally position the entire load or the arms in order to facilitate much more exact carrying and placement in a faster and much more efficient method.

The unique blade pocket design can enable operators to securely swing the unit's forks without any fear of damaging the positioning cylinders. This allows the worker the choice to either perform simultaneous or independent blade movement, depending on the requirements of the job. For most lift trucks with non-OEM carriages, complete carriages are required. Standard OEM carriages could be transformed into fork positioners on available units.
